

PORTFOLIO STRATEGY

Dearborn Partners' High & Rising Dividend Separately Managed Account (SMA) invests in a diversified set of companies with consistently rising dividends that offer a potential yield greater than the S&P 500. Companies selected offer the potential for mid-single digit annual dividend growth over the long term. The combination of this attractive current yield plus potential regular dividend increases offers investors a portfolio that we believe will perform well in both rising and falling markets.

INVESTMENT PHILOSOPHY

- ▶ Growth of dividend income
- ▶ Disciplined stock selection
- ▶ Participate in the long-term wealth-building potential of investing in great businesses
- ▶ Relatively low turnover
- ▶ Long-term investment time horizon (5+ years)

PORTFOLIO COMPANY CHARACTERISTICS

- ▶ Solid financial condition with very strong balance sheets
- ▶ Investment-grade debt (if company has debt)
- ▶ Dividends well covered by cash flow and earnings
- ▶ Operations in generally defensive businesses
- ▶ The potential to raise dividends consistently year after year

SECTORS

PORTFOLIO REVIEW

The March 19, 2019 **Ned Davis Research Group's U.S. Comment** titled **"How Powell's Dovish Pivot Impacts Dividend Stocks"** includes information persuasive to owning stocks of companies that pay dividends, especially growing dividends, given the Federal Reserve's stance revealed at the Federal Open Market Committee meeting that week.

"... The results are lower bond yields and a flatter yield curve than if the Fed shrank the balance sheet further.

The changes could have profound implications for dividend stocks, since they have acted as bond proxies throughout the era of ultralow interest rates. The implications vary, depending on the type of dividend stock and what they are compared to.

Lower interest rates mean that **dividend stocks should remain an attractive alternative to bonds**. Income-seeking investors will continue to need dividend stocks to be part of their portfolios. Bond yields should not be high enough to meet most income requirements, unless bond investors reach for riskier fixed income securities, in which case blue-chip stocks may fit their risk profiles better. . ."

Both of our Dearborn Partner Rising Dividend SMA portfolios have average current yields competitive with the end-of-quarter 2.4% yield of the U.S. 10-year Treasury bond.

An objective of our strategy is to reduce vulnerability. We believe that rising dividends offer the potential to reduce vulnerability in challenging markets.

*This statistic is Supplemental Information.

Dispersion is calculated only for an entire year.

Dividend Yield % is a percentage calculated by dividing total dividends by the current market price and multiplying by 100. **P/E 2019e** is the most-recent stock price divided by the mean analyst EPS (earnings per share) estimate for the current fiscal year. This number gives some indication of how cheap or expensive a stock is compared with consensus earnings estimates. The lower the forward P/E, the cheaper the stock. FactSet Estimates data is used in the denominator of this calculation. **Standard Deviation** is the annualized standard deviation of monthly portfolio returns, according to Bloomberg. **Estimated 3-5 Year EPS Growth** is the FactSet mean analyst estimate for annualized future EPS growth for a minimum of 3 years and maximum of 5 years, depending on available analyst estimate data. **P/E to Growth** is the P/E 2019e divided by the Estimated 3-5 Year EPS Growth. **Beta** is a measure of the degree of change in value one can expect in a portfolio given a change in value in a benchmark index. A portfolio with a beta greater than one is generally more volatile than its benchmark index, and a portfolio with a beta of less than one is generally less volatile than its benchmark index. **The Return on Equity (ROE)** is the percentage a company earns on its shareholders' equity in a given year. The calculation is net income divided by end-of-year net worth, multiplied by 100. **Long-Term Debt as a Percentage of Capital** is calculated by dividing long-term debt by total capitalization (the sum of common equity plus preferred equity plus long-term debt). **TWR** is the Time Weighted Return, also known as the Geometric Mean Return. **YTD**: year to date. **Turnover** is the lesser of purchases or sales as a percentage of the average portfolio value of a representative portfolio in the composite, annualized.

The High & Rising Dividend Composite contains discretionary accounts with a minimum size of \$100,000 that Dearborn manages pursuant to the Dearborn Partners High & Rising Dividend strategy (the "Strategy"), which is one of Dearborn's Rising Dividend strategies. For comparison purposes the composite is measured against the S&P 500 Index. The composite's inception date was September 30, 2011.

Dearborn claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Dearborn has been independently verified for the periods April 1, 1997 through December 31, 2016. The verification reports are available on request. The annual composite dispersion is an asset-weighted standard deviation calculated for the accounts in the composite the entire year. Verification assesses whether (1) Dearborn has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) Dearborn's policies and procedures are designed to calculate and present performance in compliance with GIPS. Verification does not ensure the accuracy of any specific composite presentation. A performance examination has not been conducted on this composite.

Dearborn is an SEC-registered investment adviser. Dearborn maintains a complete list and description of composites, which is available upon request. Results are based on discretionary accounts under management, including those accounts no longer managed by Dearborn.

The U.S. Dollar is the currency used to express performance. Returns are presented on a "pure gross" and net basis and include the reinvestment of all income. Pure gross returns do not reflect the deduction of any expenses, including trading costs, and are supplemental to net returns. Net of fee performance was calculated using actual fees, which includes wrap fees, management fees and trading commissions. The End of Period Strategy Asset includes the assets managed by model managers, and is supplemental to the assets in the composite. Dearborn's policies for valuing portfolios, calculating performance and preparing compliant presentations are available on request.

The Dearborn management fee schedule is 1.00% on the first \$1 million and 0.75% on amounts over \$1 million, but actual fees may vary. The Composite was created September 30, 2011. Past performance is no guarantee of future results. This report is not a complete description of or recommendation to invest in the Strategy. There is no assurance the Strategy will be profitable, achieve its objectives, be suitable for you, or not incur losses. Some of the information herein has been obtained from third party sources. We believe such information is reliable but we have not in each case verified its accuracy or completeness. Any opinions herein are as of the date of this report and are subject to change without notice. Dividends are not guaranteed and must be authorized by the company's board of directors. Dividend Yield is one component of performance and should not be the only consideration for investment.

The S&P 500 is an unmanaged index of 500 widely held stocks that is generally considered representative of the U.S. stock market. Inclusion of this index is for illustrative purposes only. You cannot invest directly in any index, and index performance does not include transaction costs or other fees, which will affect actual investment performance.
